

Introduction to SMART Solutions

ASSETS, ECDA and the Info-communications Media Development Authority of Singapore (IMDA) have jointly evaluated the pre-approved vendors for smart IT solutions to aid pre-schools in their day-to-day processes and streamline administrative duties for educators. The intended objective of these solutions is to enable preschools to move away from the conventional way of doing things to adopting technology-based solutions to improve productivity.

Selection Criteria

The solutions were assessed based on the following criteria. The solutions should:

- a) Improve productivity in preschools;
- b) Be affordable and provide value for money;
- c) Be able to integrate with ECDA's systems;
- d) Be easy to navigate and use; and
- e) Be Future-Ready (e.g. be able to support future technological advancements).

Qualified Vendors

After a stringent selection process, 5 vendors were selected to provide a range of solutions such as modules on preschool management, including student, staff and operational matters, finance and communication management. Preschools that subscribe to these qualified vendors may be eligible to receive government funding.

For application details:

Organisation Type	Application details
